

## APPENDIX

### Table of Contents

Patient characteristics by year of surgery .....	2
Primary total knee replacement .....	2
Primary total hip replacement.....	4
Revision total knee replacement .....	6
Revision total hip replacement.....	8
Length of stay by year of surgery .....	10
Hospital costs by year of surgery.....	12
Partial effect of age on length of stay and costs.....	14
Partial effect of age at surgery on length of stay from multivariable regressions. Predicted length of stay by age while other explanatory variables are held fixed at their average (median if continuous and mode if categorical). TKR: total knee replacement, THR: total hip replacement.....	14
Partial effect of age at surgery on hospital costs (in 2017 GBP) from multivariable regressions. Predicted cost by age while other explanatory variables are held fixed at their average (median if continuous and mode if categorical). TKR: total knee replacement, THR: total hip replacement.....	14

PATIENT CHARACTERISTICS BY YEAR OF SURGERY

**Primary total knee replacement**

Year of surgery	n	Age (mean (sd))	Gender: Male (n (%))	Rheumatoid arthritis (n (%))	RCS Charlson score (n (%))				IMD quintiles (n (%))				
					0	1	2	3+	1	2	3	4	5

Number of study participants (N) with mean cost with standard error (se) by year. THR: total hip replacement, TKR: total knee replacement

## PARTIAL EFFECT OF AGE ON LENGTH OF STAY AND COSTS

**Partial effect of age at surgery on length of stay from multivariable regressions. Predicted length of stay by age while other explanatory variables are held fixed at their average (median if continuous and mode if categorical). TKR: total knee replacement, THR: total hip replacement.**

**Partial effect of age at surgery on hospital costs (in 2017 GBP) from multivariable regressions. Predicted cost by age while other explanatory variables are held fixed at their average (median if continuous and mode if categorical). TKR: total knee replacement, THR: total hip replacement.**
