Supplementary file 2: Articles that contributed data to theory development (listed chronologically by Country)

Lead author	Country	Title	Study Design
		Primary care services co-located with Emergency Departments across a UK region: early views on their	
Ablard 2017	UK	development	Survey and semi-structured interviews
Bentley 2017	UK	Emergency Department redirection to primary care: a prospective evaluation of practice	Prospective evaluation of the subsequent management and outcome of redirected non-urgent patients from a Scottish ED over 2 months
Dale 2017	UK	Extended training to prepare GPs for future workforce needs: a qualitative investigation of a one-year fellowship in urgent care	Qualitative investigation of a one-year fellowship in urgent care
Tammes 2016	UK	Exploring the relationship between general practice characteristics, and attendance at walk-in centres, minor injuries units and EDs in England 2012/2013: a cross-sectional study	Cross-sectional observational large data analysed using multivariable regression models
Proctor 2016	UK	A&E Avoidance schemes across London: A rapid review of good practice examples	NHS report - 2 case studies involving redirection of non- urgent patients from the ED
Smith 2016	UK	To GP or not TO GP: Evaluation of children triaged to see a GP in a tertiary paediatric emergency department	Retrospective cohort study of children classified as 'GP appropriate' seen by a GP between 14:00 and 22:00 and seen by ED staff outside these hours
Gnani 2016	UK	Healthcare use among preschool children attending GP-led urgent care centres: a descriptive observational study	Retrospective observational study using routinely collected data
O'Cathain 2016	UK	Variation in avoidable emergency admissions: multiple case studies of emergency and urgent care systems	Ethnographic residual analysis. Interviews with members of emergency care teams at 6 case study sites

Begum 2016	UK	Solving the A&E crisis using GP lead triage and redirection	Poster - Patient questionnaire of 150 patients over 5 weeks redirected back to the GP for treatment with an appointment made on the same day
Gritz 2016	UK	More under fives now seen in urgent care centre than A&E should we shift our focus	Observational - retrospective analysis of routine operational data for attendances
Greenfield 2016	UK	Staff perceptions on patient motives for attending GP-led urgent care centres in London: a qualitative study	Semi-structured interviews
Cowling 2015	UK	Referral outcomes of attendances at general practitioner-led urgent care centres in London, England: retrospective analysis of hospital administrative data	Retrospective analysis of administrative data recorded at a London urgent care centre of 243042 attendances from October 2009 to December 2012
Morton 2016	UK	Describing team development within a novel GP-led urgent care centre model: a qualitative study	Staff semi-structured interviews at 2 GP-led urgent care centres in 2 London academic teaching hospitals
Arain 2015a	UK	Perceptions of healthcare professionals and managers regarding the effectiveness of GP-led walk-in centres in the UK	Qualitative using a phenomenological approach using semi structured interviews
Arain 2015b	UK	Impact of a GP-led walk-in centre on NHS emergency departments	Patient survey over a 3-week period and analysis of attendances at the local children's hospital and minor injuries unit a year before and after the WIC opened
Johnson 2015	UK	Evidence of primary care services at A&E	Letter (opinion piece) Provider of 4 UCC in London supporting co-located GPs services with emergency departments

NHS ECIST 2015	UK	Primary care in emergency departments: a guide to good practice	NHS policy document - Overview of factors to be considered when planning how best to use primary care clinicians in emergency departments, monitoring and refining the service
Harris 2014	UK	How do clinicians with different training backgrounds manage walk-in patients in the ED setting?	Retrospective case note review of a random sample of 384 patients that self-presented to the ED and were initially assessed by GPs or ED staff
Thompson 2013	UK	Suitability of emergency department attenders to be assessed in primary care: survey of general practitioner agreement in a random sample of triage records analysed in a service evaluation project	Four GPs independently used data extracted from 765 clinical notes to rate the appropriateness for management in primary care
Arain 2013	UK	Patients' experience and satisfaction with GP led walk- in centres in the UK; a cross sectional study.	Patient survey over 3 weeks in 2 GP-led WICs
Hunter 2013	UK	A qualitative study of patient choices in using emergency health care for long-term conditions: The importance of candidacy and recursivity.	Questionnaire and semi-structured interviews
Lengu 2012	UK	Application of simulation and modelling in managing unplanned healthcare demand	Conference paper - Simulation and modelling to assess the impact of primary care clinicians deflecting patients with non-urgent needs away from A&E
Carson 2010	UK	Primary care and emergency departments	Report based on results of a literature review, web-based survey and ED visits
Clancy 2009	UK	Launching a social enterprise see-and-treat service	Report outlining the service, number of patients seen and referred on in a 4-month period
Maheswaren 2009	UK	Repeat attenders at national health service walk in centres	Descriptive study using routine data from 4 walk-in centres in England

Sandhu 2009	UK	Emergency nurse practitioners and doctors consulting with patients in an emergency department: a comparison of communication skills and satisfaction	Observation study with a stratified sample of 296 video-taped consultations
Dale 2008	UK	The patient, the doctor and the emergency department: A cross-sectional study of patient-centeredness in 1990 and 2005	Observational study with a stratified sample of 430 video- taped consultations with data collection in May–July 1990 and May–July 2005.
Salisbury 2007	UK	The impact of co-located NHS walk-in centres on emergency departments	Controlled before and after study
Chalder 2007	UK	Comparing care at walk-in centres and at accident and emergency departments: an exploration of patient choice, preference and satisfaction	A controlled, mixed-method study comparing 8 EDs with colocated WICs with the same number of "traditional" EDs.
Pope 2005	UK	What do other local providers think of NHS walk-in centres? Results of a postal survey	Postal survey
Bickerton 2005	UK	Streaming A&E patients to walk-in centre services	Analysis of all patients attending a London hospital over 24 hours for suitability for WIC treatment
Chew-Graham 2004	UK	A new role for the general practitioners? Reframing inappropriate attenders to inappropriate services	Qualitative semi-structured staff interviews
Hsu 2003	UK	Effect of NHS walk-in centre on local primary healthcare services	Before and after observational study of consultation rate in 12 general practices after the implementation of a walk-in centre
Salisbury 2002	UK	What is the role of walk-in centres in the NHS?	Analysis of routinely collected data, questionnaire completed by managers followed by semi-structured interviews and site visits
Grant 2002	UK	An observational study comparing quality of care in walk-in centres with general practice and NHS Direct using standardised patients	Observational study involving assessment of clinicians by standardised patients at 20 walk in centres, 20 general practices ad 11 NHS direct sites

Coleman 2001	UK	Will alternative immediate care services reduce demands for non-urgent treatment at accident and emergency?	Questionnaire survey and notes review of non-urgent patients to assess the suitability of management by an alternative care service
McGugan 2000	UK	Primary care or A&E?	Prospective study over 2 months of a redirection policy
Rajpar 2000	UK	Study of choice between accident and emergency departments and general practice centres for out of hours primary care problems	Interview of patients attending A&E and GP out-of-hours
Freeman 1999	UK	Primary care units in A and E departments in North Thames in the 1990s: Initial experience and future implications	Postal questionnaire to ED staff and local GPs with follow up staff interviews
Dale 1998	UK	Primary care in accident and emergency departments: the cost effectiveness and applicability of a new model of care	PhD thesis – Includes data for included papers and additional analysis of 163 video-taped consultations
Ward 1996	UK	Primary care in London: an evaluation of general practitioners working in an inner-city accident and emergency department	Prospective survey over 6 weeks
Dale 1996	UK	Cost effectiveness of treating primary care patients in accident and emergency: a comparison between GPs, senior house officers and registrars	Prospective intervention study which was retrospectively costed
Dale 1995a	UK	Primary care in the accident and emergency department I: Prospective identification of patients	1 year prospective study at a London ED to compare patient characteristics and consultation activities for attenders assessed by nurse triage to have 'primary care' or 'accident and emergency' type problems
Dale 1995b	UK	Primary care in the accident and emergency department: II. Comparison of general practitioners and hospital doctors	1 year prospective study at a London ED to compare patient characteristics and consultation activities for attenders assessed by nurse triage to have 'primary care' or 'accident and emergency' type problems

Randomised controlled trial of general practitioner versus usual medical care in an urban accident and emergency department: process, outcome and comparative cost Van Veelen 2016 Randomised controlled trial of care provided by general practitioners to non-emergency patients in an accident and emergency department differs significantly from care by usual emergency staff in terms of process, outcome ad cost Pre-post comparison before and after implementation of a GP cooperative at an ED Access to diagnostic tests during GP out-of -hours care: A cross sectional study of all GP out-hours Cross-sectional survey of all 117 GP out of hours services in				
O'Kelly 2010 Ireland department attendances categories 4 and 5 of the same hospital over a 9-year period Effect of patients seeing a general practitioner in accident and emergency on their subsequent attendance: cohort study and emergency staff depending on time of registration Randomized controlled trial of general practitioner versus usual medical care in a suburban accident and emergency department using an informal triage system Randomised controlled trial of general practitioner versus usual medical care in an urban accident and emergency department: process, outcome and comparative cost Randomised controlled trial of general practitioner versus usual medical care in an urban accident and emergency department: process, outcome and comparative cost Effects of a general practitioner cooperative colocated with an emergency department on patient throughput Access to diagnostic tests during GP out-of-hours care: A cross sectional study of all GP out-hours services in the Netherlands Van-Gils-van Is patient flow more efficient in urgent care Categories 4 and 5 of the same hospital over a 9-year period Analysis of reattendance of non-urgent patients that had been allocated to general practitioners or usual accident and emergency staff depending on time of registration Analysis of reattendance of non-urgent patients that had been allocated to general practitioners or usual accident and emergency staff depending on time of registration Patients 'randomised' at time of registration to either GP or ED care. Case note review Randomised controlled trial of care provided by general practitioners to non-emergency patients in an accident and emergency department differs significantly from care by usual emergency staff in terms of process, outcome ad cost Fre-post comparison before and after implementation of a GP cooperative at an ED Cross-sectional survey of all 117 GP out of hours services in the Netherlands Under the defence of the provided by general practitioner on the patients 'randomised' at time of				A retrospective review of all attendances at the 'Dubdoc'
Effect of patients seeing a general practitioner in accident and emergency on their subsequent attendance: cohort study Randomized controlled trial of general practitioner versus usual medical care in a suburban accident and emergency department using an informal triage system Randomised controlled trial of general practitioner versus usual medical care in a suburban accident and emergency department using an informal triage system Randomised controlled trial of general practitioner versus usual medical care in an urban accident and emergency department: process, outcome and comparative cost Randomised controlled trial of general practitioner versus usual medical care in an urban accident and emergency department differs significantly from care by usual emergency staff in terms of process, outcome ad cost Effects of a general practitioner cooperative colocated with an emergency department on patient throughput Access to diagnostic tests during GP out-of -hours care: A cross sectional study of all GP out-hours services in the Netherlands Schols 2016 Netherlands Randomised controlled trial of care provided by general practitioners to non-emergency patients in an accident and emergency department differs significantly from care by usual emergency staff in terms of process, outcome ad cost Pre-post comparison before and after implementation of a GP cooperative at an ED Cross-sectional survey of all 117 GP out of hours services in the Netherlands Van-Gils-van Is patient flow more efficient in urgent care Observational study, compared usual care with UCCs (single				· · · · · · · · · · · · · · · · · · ·
Access to diagnostic tests during GP out-of-hours Care: A cross sectional study of the subsequent attendance: A cross sectional study of the Netherlands on time of registration of the Murphy 2000 Ireland attendance: cohort study of the Netherlands on time of registration on time of registratio	O'Kelly 2010	Ireland	department attendances	categories 4 and 5 of the same hospital over a 9-year period
Access to diagnostic tests during GP out-of-hours Care: A cross sectional study of the subsequent attendance: A cross sectional study of the Netherlands on time of registration of the Murphy 2000 Ireland attendance: cohort study of the Netherlands on time of registration on time of registratio

		Paediatric emergency department management		
		benefits from appropriate early redirection of non-	Prospective observational study using ED records and case	
Ellbrant 2015	Sweden	urgent visits	notes	
		Provision for clinic patients in the ED produces more		
Krakau 1999	Sweden	nonemergency visits	Before and after observational study	

Hansagi 1987	Sweden	Trial of a method of reducing inappropriate demands on a hospital emergency department.	Prospective observational study of 454 patients classified as non-urgent by the ED and redirected to alternative care over a 3-month period	
Chmiel 2016 Switzerlan		Implementation of a hospital-integrated general practice – a successful way to reduce the burden of inappropriate emergency-department use	Longitudinal observational study	
Hess 2015	Switzerland	Satisfaction of health professionals after implementation of a primary care hospital emergency centre in Switzerland: A prospective before-after study	Questionnaire study of job satisfaction before and after a new emergency care model was implemented in Switzerland	
Wang 2014	Hospital integrated general practice: a promising way		Pre and post comparison study before and after implementation of a new hospital-integrated general practice model	
Chmiel 2011	Switzerland	Walk-ins seeking treatment at an emergency department or general practitioner out-of-hours service: a cross-sectional comparison	Analysis of routinely collected data of 2974 patient encounters attending a GPC or ED	
Posocco 2017	Italy	Role of out of hours primary care service in limiting inappropriate access to emergency department	Retrospective analysis of 408 ED referrals from a local OOH service	
Kork 2016	Finland	Improving access and managing healthcare demand with walk in clinic: convenient but at what cost?	Observational study over 48 months of the characteristics of 107 frequent attenders at a WIC from electronic patient records	
Allen 2015	Australia	Low acuity and general practice type presentations to emergency departments: A rural perspective	Analysis of GP type presentations to 2 rural EDs over a 4-month period	
Desborough 2013	Australia	Development and implementation of a nurse-led walk-in centre: evidence lost in translation?	Evaluation of the first 12 months of operation of the first Australian public nurse-led primary care walk-in centre compared to the English NHS model.	

Nagree 2013	Australia	Quantifying the proportion of general practice and low-acuity patients in the emergency department	Four methods for calculating general practice-type patients were compared for 3 tertiary EDs in Perth, Australia in 2009-2011
Sharma 2011	Impact of co-located general practitioner (GP) clinics and patient choice on duration of wait in the emergency department		Mathematical modelling of wait times using routine ED data
Richardson 2009	Australia	Myths versus facts in emergency department overcrowding and hospital access block.	Report referencing previous work
Bolton 2001	Australia	The reasons for, and lessons learned from, the closure of the Canterbury GP After-Hours Service.	Report describing why a 12-month trial of GP staffed after hours service with an ED was not continued because the opportunity cost was greater than existing alternative services
Doran 2013	department patients with primary care: Effect on ED		Analysis of primary care follow up of patients presenting to ED assessed to have non-urgent problem and referred to an onsite primary care clinic
Williams 1996	USA	The costs of visits to emergency departments.	Analysis of emergency department charges and costs based on data from 6 community hospitals
Gadomski 1995	USA	Diverting managed care Medicaid patients from pediatric emergency department use.	6-month follow up of Medicaid children with non-emergent conditions not authorised to be seen in the Pediatric Emergency Department by their primary care provider
Derlet 1995	USA	Prospective identification and triage of nonemergency patients out of an emergency department - 5 year study	5 year study to analyse the outcome of adult patients refused care in the ED
Derlet 1992	USA	Triage of patients out of the emergency department: three year experience.	3 year study to analyse the outcome of adult patients refused care in the ED

Birnbaum 1994	USA	Failure to validate a predictive model for refusal of care to emergency-department patients.	Analysis of the outcome of 534 patients that met the pre- established criteria for refusal of care	
Lowe 1994	USA	Refusing care to emergency department patients: evaluation of published triage guidelines.	Case note review of 106 patients who would have been refused care according to triage guidelines	
Shaw 1990	USA	Indigent children who are denied care in the emergency department.	Six-month prospective study of 588 children denied care in the emergency department	
Rivara 1986	USA	Pediatric nurse triage: its efficacy, safety and implications for care.	Evaluation of emergency room triage of 748 children over a 6-week period at a large urban children's hospital that routinely referred outside of the institution for care	
Schull 2007	Canada	The Effect of Low-Complexity Patients on Emergency Department Waiting Times	Analysis of 4.1 million patient visits over a 1 year period (2002-3) and 110 EDs of the effect of low-complexity patients on time of physician contact of high complexity patients	
Vertesi 2004	Canada	Does the Canadian Emergency Department Triage and Acuity Scale identify non-urgent patients who can be triaged away from the emergency department?	Retrospective database audit in an urban referral hospital ED.	
Hutchison 2003	Canada	Patient satisfaction and quality of care in walk-in clinics, family practices and emergency departments: the Ontario Walk-In Clinic Study.	Prospective cohort study of the quality of care of 8 common acute conditions and patient satisfaction	
Anantharaman 2008	Singapore	Impact of health care system interventions on emergency department utilisation and overcrowding in Singapore	Retrospective analysis of attendances at six main public EDs over 32 years	
Wilson 2005	New Zealand	Co-locating primary care facilities within emergency departments: brilliant innovation or unwelcome intervention into clinical care?	Report reviewing a proposal to co-locate a primary care facility within the local emergency department
