

Supplementary Information

Supplementary Box 1. Guiding questions for semi-structured focus group discussion.

1. Which types of patients or consults would be the best candidates to be offered a telehealth consult or not, and why?
2. What types of populations would benefit from continued access to telehealth beyond the COVID 19 pandemic? What are the potential reasons or explanations for your feelings around this?
3. What do you perceive to be the barriers to telehealth uptake? What would you do to break down or reduce the impact of these barriers?
4. What are your thoughts about tools for helping to share things that would normally be done visually face-to-face?
5. What were the primary medical issues or reasons when GPs used telehealth, specifically using video consultations, among aged care residents?
6. If something like a prescription or blood tests needs to be ordered, do you just do it the same way you would have if you were face to face with them?
